Section 1 : Coding

1. Problem Statement

You are working as a developer for CityCab, a taxi service company that wants to build a ride fare management system.

Each customer booking has:

A Booking ID (integer)
A Customer Name (string)
A Distance Travelled in km (double)

The fare calculation rules are:

Base Fare = 50 units (flat charge for every ride). Per km charge = 10 units/km. If the distance is greater than 20 km, a 10% discount is applied on the total fare.

You are required to implement this system using:

A class with attributes for booking details. A constructor to initialize booking details. Setter methods to update details if needed. Getter methods to retrieve details. Objects of the class to represent customer rides.

Finally, display each booking's details and final fare.

Input Format

The first line of input contains an integer N, representing the number of bookings.

For each booking:

- The next line contains the booking ID (integer).
- The following line contains the customer's name (string).
- The next line contains the distance travelled (double).

Output Format

For each booking, print the details in the following format:

1. Booking ID: <booking_id>
2. Customer Name: <customer_name>
3. Final Fare: <final_fare> (rounded to one decimal place)

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 1

1234

Rahul Sharma

15

Output: Booking ID: 1234

Customer Name: Rahul Sharma

Final Fare: 200.0

Answer

```
import java.util.*;  
import java.text.DecimalFormat;
```

```
public class Main {  
    static class Booking {  
        int id; String name; double d;  
        Booking(int id, String name, double d) {this.id=id;this.name=name;this.d=d;}  
        double fare() { double t=50+10*d; return d>20? t*0.9 : t; }  
    }  
  
    public static void main(String[] a){  
        Scanner sc=new Scanner(System.in);  
        int N=sc.nextInt(); sc.nextLine();  
        StringBuilder o=new StringBuilder(); DecimalFormat f=new  
        DecimalFormat("#0.0");  
        for(int i=0;i<N;i++){  
            int id=Integer.parseInt(sc.nextLine().trim());  
            String name=sc.nextLine().trim();  
            while(name.isEmpty()) name=sc.nextLine().trim();  
            double dist=Double.parseDouble(sc.nextLine().trim());  
            Booking b=new Booking(id, name, dist);  
            o.append("Booking ID: ").append(b.id).append('\n')  
                .append("Customer Name: ").append(b.name).append('\n')  
                .append("Final Fare: ").append(f.format(b.fare())).append('\n');  
        }  
        System.out.print(o.toString());  
    }  
}
```

Section 1 : Coding

1. Problem Statement

Neha is working as a developer for CityElectricity Board, which wants to build a household electricity billing system.

Each customer's electricity account has:

A Customer ID (integer) A Customer Name (string) Units Consumed (double)

The electricity bill is calculated based on these rules:

For the first 100 units 5 units charge per unit
For the next 100 units (101–200) 7 units charge per unit
For units above 200 10 units charge per unit
If the total bill exceeds 2000 units, a 5% discount is applied on the final bill.

Neha has been asked to implement this system using:

A class with attributes for customer details. A constructor to initialize customer details. Setter methods to update details if needed. Getter methods to retrieve details. Objects of the class to represent customers.

Finally, display each customer's details and final bill amount.

Input Format

The first line of input contains an integer N, representing the number of customers.

For each customer:

- The next line contains the Customer ID (integer).
- The following line contains the Customer Name (string).
- The next line contains the Units Consumed (double).

Output Format

For each customer, print the details in the following format:

Customer ID: <customer_id>

Customer Name: <customer_name>

Final Bill: <final_bill> (rounded to one decimal place)

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 1

1001

Ravi Kumar

80

Output: Customer ID: 1001

Customer Name: Ravi Kumar

Final Bill: 400.0

Answer

```
import java.util.*;
```

```

class Customer {
    int id;
    String name;
    double units;

    Customer(int id, String name, double units) { this.id = id; this.name = name;
this.units = units; }

    double bill() {
        double u = units, b = 0;
        if (u > 0) { double t = Math.min(u, 100); b += t * 5; u -= t; }
        if (u > 0) { double t = Math.min(u, 100); b += t * 7; u -= t; }
        if (u > 0) b += u * 10;
        return b > 2000 ? b * 0.95 : b;
    }
}
class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        int n = sc.hasNextInt() ? sc.nextInt() : 0;
        sc.nextLine();

        StringBuilder out = new StringBuilder();
        for (int i = 0; i < n; i++) {
            int id = Integer.parseInt(sc.nextLine().trim());
            String name = sc.nextLine().trim();
            double units = Double.parseDouble(sc.nextLine().trim());

            Customer c = new Customer(id, name, units);
            out.append("Customer ID: ").append(c.id).append("\n")
                .append("Customer Name: ").append(c.name).append("\n")
                .append("Final Bill: ").append(String.format(java.util.Locale.US, "%.1f",
c.bill())).append("\n");
        }
        System.out.print(out.toString());
        sc.close();
    }
}

```

Section 1 : Coding

1. Problem Statement

You are working as a developer for CityBank, which wants to build a basic account management system.

Each customer at the bank has:

An Account Number (integer)
A Customer Name (string)
An Initial Balance (double)

The bank allows two types of transactions:

Deposit – increases the balance.
Withdrawal – decreases the balance only if enough funds are available.

If the withdrawal amount is greater than the balance, the withdrawal should not happen, and the balance should remain the same.

You are required to implement this system using:

A class with attributes for account details. A constructor to initialize account details. Setter methods to update details if needed. Getter methods to retrieve details. Objects of the class to represent customers.

Finally, display each customer's account details after all transactions.

Input Format

The first line of input contains an integer N, representing the number of customers.

For each customer:

- The next line contains the account number (integer).
- The following line contains the customer name (string).
- The next line contains the initial balance (double).
- The next line contains the deposit amount (double).
- The next line contains the withdrawal amount (double).

Output Format

For each customer, print the details in the following format:

1. Account Number: <account_number>
2. Customer Name: <customer_name>
3. Final Balance: <final_balance> (rounded to one decimal place)

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 1

1234

Rahul Sharma

5000

2000

3000

Output: Account Number: 1234

Customer Name: Rahul Sharma

Final Balance: 4000.0

Answer

```
import java.util.*;  
  
class Customer {  
    int accNum;  
    String name;  
    double balance;  
  
    Customer(int accNum, String name, double balance) {  
        this.accNum = accNum;  
        this.name = name;  
        this.balance = balance;  
    }  
  
    void deposit(double amount) {  
        balance += amount;  
    }  
  
    void withdraw(double amount) {  
        if (amount <= balance) balance -= amount;  
    }  
  
    void display() {  
        System.out.println("Account Number: " + accNum);  
        System.out.println("Customer Name: " + name);  
        System.out.printf("Final Balance: %.1f\n", balance);  
    }  
}  
  
class Main {  
    public static void main(String[] args) {  
        Scanner sc = new Scanner(System.in);  
        int n = Integer.parseInt(sc.nextLine());  
  
        for (int i = 0; i < n; i++) {  
            int accNum = Integer.parseInt(sc.nextLine());  
            String name = sc.nextLine();  
            double balance = Double.parseDouble(sc.nextLine());  
            double deposit = Double.parseDouble(sc.nextLine());  
            double withdraw = Double.parseDouble(sc.nextLine());  
        }  
    }  
}
```

```
        Customer c = new Customer(accNum, name, balance);
        c.deposit(deposit);
        c.withdraw(withdraw);
        c.display();
    }
}
```

1. What will be the output of the following code?

```
class Demo {  
    void printMessage(){  
        System.out.println("Hello from Demo");  
    }  
}
```

```
public class Main {  
    public static void main(String[] args) {  
        Demo d = new Demo();  
        d.printMessage();  
    }  
}
```

Answer

Hello from Demo

Status : Correct

Marks : 1/1

2. What will be the output of the following code?

```
class MathUtils {  
    int add(int x) {  
        return x + x;  
    }  
}  
  
public class Main {  
    public static void main(String[] args) {  
        MathUtils m = new MathUtils();  
        System.out.println(m.add(5));  
    }  
}
```

Answer

10

Status : Correct

Marks : 1/1

3. What will be the output of the following code?

```
class Person {  
    int age = 18;  
}
```

```
public class Main {  
    public static void main(String[] args) {  
        Person p = new Person();  
        p.age += 2;  
        System.out.println("Age: " + p.age);  
    }  
}
```

Answer

Age: 20

Status : Correct

Marks : 1/1

4. What will be the output of the following code?

```
class A {  
    int y = 30;  
}  
  
public class Main {  
    public static void main(String[] args) {  
        A a1 = new A();  
        A a2 = new A();  
        a1.y = 50;  
        System.out.println(a2.y);  
    }  
}
```

Answer

30

Status : Correct

Marks : 1/1

5. What will be the output of the following code?

```
class Alpha {  
    void greet(String name) {  
        System.out.println("Hello " + name);  
    }  
}
```

```
public class Main {  
    public static void main(String[] args) {  
        Alpha obj = new Alpha();  
        obj.greet("Anu");  
    }  
}
```

Answer

Hello Anu

Status : Correct

Marks : 1/1

6. What will be the output of the following code?

```
class A {  
    int x = 50;  
}  
  
public class Main {  
    public static void main(String[] args) {  
        A obj1 = new A();  
        A obj2 = obj1;  
        obj2.x = 100;  
        System.out.println(obj1.x);  
    }  
}
```

Answer

100

Status : Correct

Marks : 1/1

7. What will be the output of the following code?

```
class Box {  
    int length = 5;  
    int width = 4;  
  
    int area() {  
        return length * width;  
    }  
  
    public static void main(String[] args) {  
        Box b = new Box();  
        System.out.println("Area = " + b.area());  
    }  
}
```

```
}
```

Answer

Area = 20

Status : Correct

Marks : 1/1

8. What will be the output of the following code?

```
class Sample {  
    int x = 10;  
  
    void display() {  
        System.out.println("x = " + x);  
    }  
  
    public static void main(String[] args) {  
        Sample s = new Sample();  
        s.display();  
    }  
}
```

Answer

x = 10

Status : Correct

Marks : 1/1

9. What will be the output of the following code?

```
class Box {  
    int volume(int l, int b, int h) {  
        return l * b * h;  
    }  
  
    public class Main {  
        public static void main(String[] args) {  
            Box b = new Box();  
        }  
    }  
}
```

```
        System.out.println(b.volume(2, 3, 4));  
    }  
}
```

Answer

24

Status : Correct

Marks : 1/1

10. What is the output of the following code?

```
class Box {  
    int height;  
    Box(int height) {  
        this.height = height;  
    }  
    void modifyHeight(Box b) {  
        b.height += 10;  
    }  
}  
public class Main {  
    public static void main(String[] args) {  
        Box b1 = new Box(20);  
        b1.modifyHeight(b1);  
        System.out.println(b1.height);  
    }  
}
```

Answer

30

Status : Correct

Marks : 1/1

11. What will be the output of the following code?

```
class A {  
    int p = 5;  
    int q = 2;  
}
```

```
class Main {  
    public static void main(String[] args) {  
        A obj = new A();  
        System.out.println(obj.p + obj.q);  
    }  
}
```

Answer

7

Status : Correct

Marks : 1/1

12. What will be the output of the following code?

```
class A {  
    int val = 20;  
}
```

```
public class Main {  
    public static void main(String[] args) {  
        A obj1 = new A();  
        A obj2 = obj1;  
        obj2.val += 5;  
        System.out.println(obj1.val);  
    }  
}
```

Answer

25

Status : Correct

Marks : 1/1

13. What will be the output of the following code?

```
class Ball {  
    int size = 11;  
}
```

```
class Game {  
    public static void main(String[] args) {  
        Ball b1 = new Ball();  
        Ball b2 = new Ball();  
        b2.size = 10;  
        System.out.println(b1.size);  
    }  
}
```

Answer

11

Status : Correct

Marks : 1/1

14. What will be the output of the following code?

```
class Person {
